YOUR PUNCH WALK, STEP BY STEP

7 Brew project managers track punch list items in the Punch Walk app. You use the **vendor page**, a simple web page that works on any phone or computer. There is no account to create, nothing to install, and your photos are not uploaded anywhere. They travel only in the files you send back. Please read this before the punch walk so you are ready on the day.

Vendor page	**https://dgray-apmg.github.io/Punch-walk/vendor.html**
Password	The stand number (your project manager will tell you)
You will need	A phone for the walk, and a phone or computer for completing tasks afterward

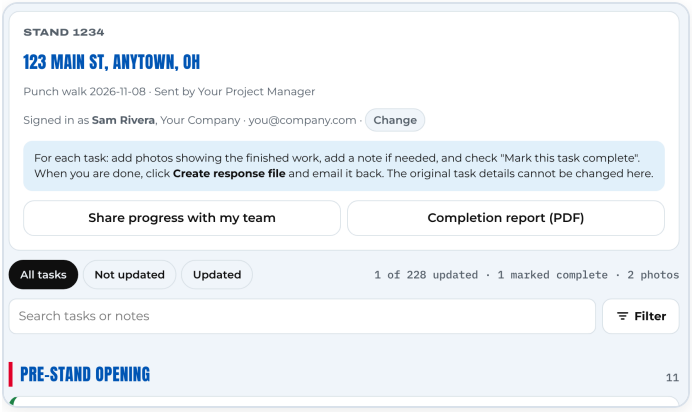

BEFORE GET READY

1. **Save the vendor page on your phone.** Open the link above. iPhone: Safari > Share > **Add to Home Screen**. Android: Chrome > menu > **Add to Home screen**. It then opens like an app.
2. **Know the stand number.** It is the password for every file in this process.
3. **Be ready to receive a file.** iPhone: turn on AirDrop (Settings > General > AirDrop > Contacts Only or Everyone for 10 Minutes). Android: make sure you can receive files by text or email.
4. **Charge your phone** and have your email available on it.

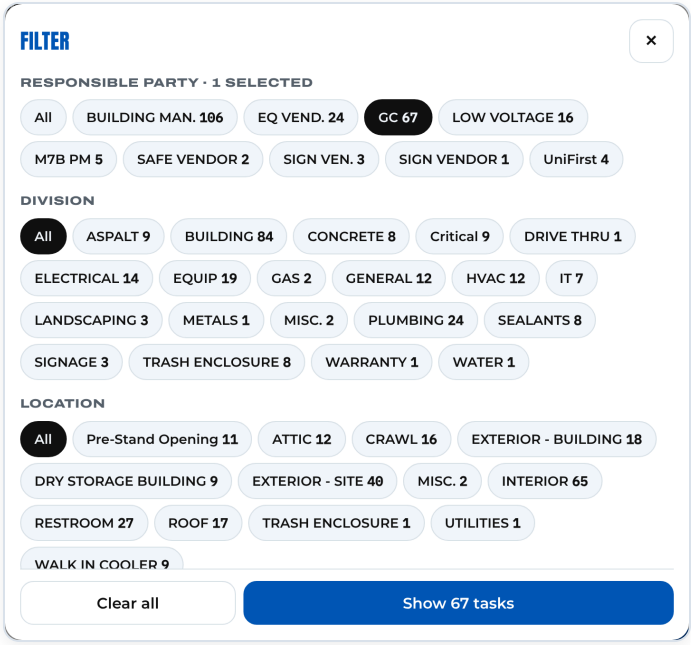

DURING WALK WITH THE PROJECT MANAGER

The project manager can send you a **walk partner file** by AirDrop or text, so you have the punch list on your own phone while you walk together.

1. Save the file (iPhone: **Save to Files**). Open the vendor page and click **Choose task file**, select it, and enter the stand number.
2. Enter your name, company and email.
3. You now see every open item for all trades, grouped by area, with the project manager's notes. Tap **Filter** to pick a **responsible party**, **division** or **location**, the same filters the project manager uses, so you can follow the area you are walking. Pick as many as you like; **Clear all** resets them. Use the search box to find an item, and **Not updated** and **Updated** to see what is left.
4. If you fix something on the spot, add a photo and a note and check **Mark this task complete**.
5. The project manager may send a newer file after each area. Always open the newest one. If you added updates, send a response file (see step 4 under "After") before switching to a new file.

Search, Filter, and tasks grouped by area. The two buttons are explained under "Working as a team".

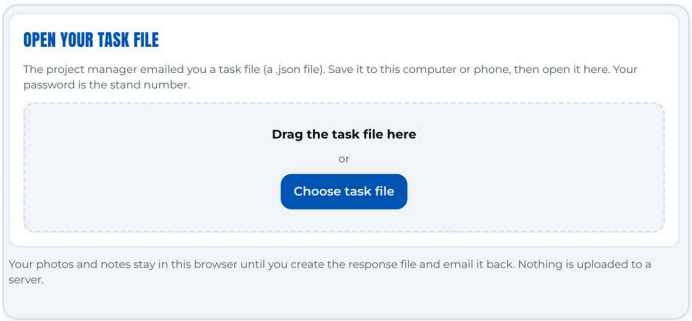

Filter by responsible party, division and location.

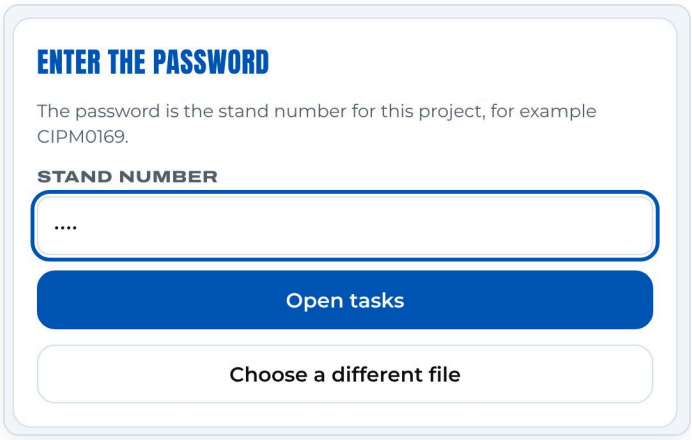

AFTER COMPLETE YOUR PUNCH LIST

After the walk, the project manager sends you a **vendor package** (.zip) by email or a file-sharing link. Unzip it. It contains instructions for your stand, a punch list PDF for reference, and your **task file** (.json).

1. OPEN THE TASK FILE

On the vendor page, click **Choose task file** (or drag the file onto the box), enter the stand number, and click **Open tasks**.

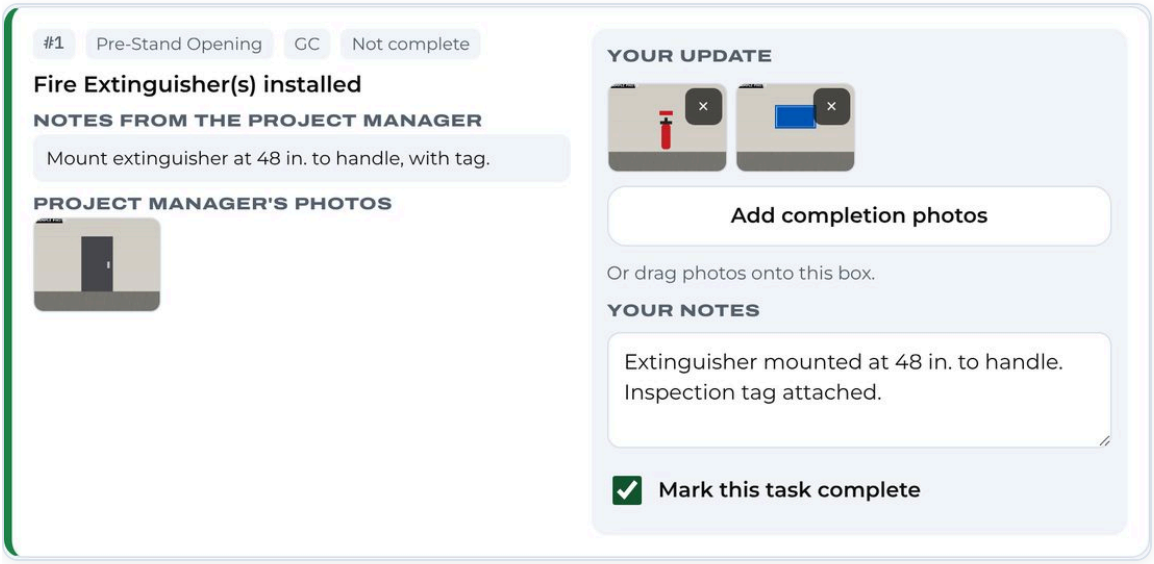

2. ENTER YOUR CONTACT INFORMATION

Your name, company and email. The project manager uses your email to tell you which tasks were accepted or need more work.

3. UPDATE EACH TASK

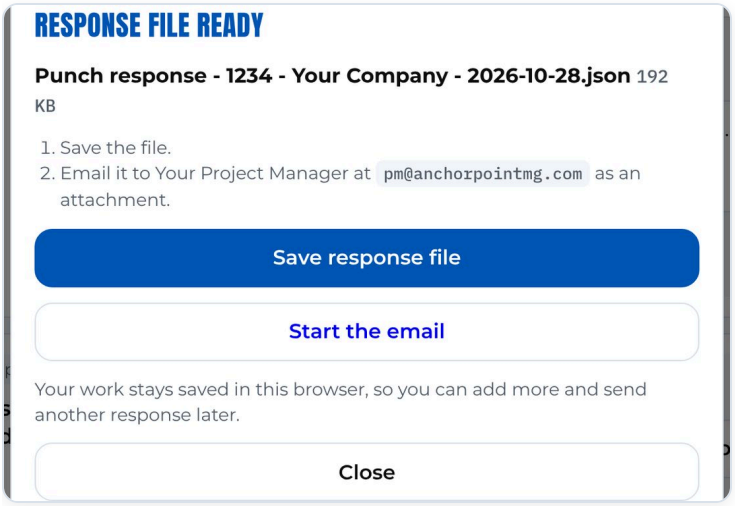

Click **Add completion photos** (or drag photos onto the box), write a note about what was done, and check **Mark this task complete** when the work is finished. Leave it unchecked to send a progress note only.

A completed task: photos added, note written, marked complete.

4. CREATE THE RESPONSE FILE AND EMAIL IT BACK

Click **Create response file**, then **Save response file**, and email the file to the project manager **as an attachment**. You can send several response files as you go. Each one adds to the last.

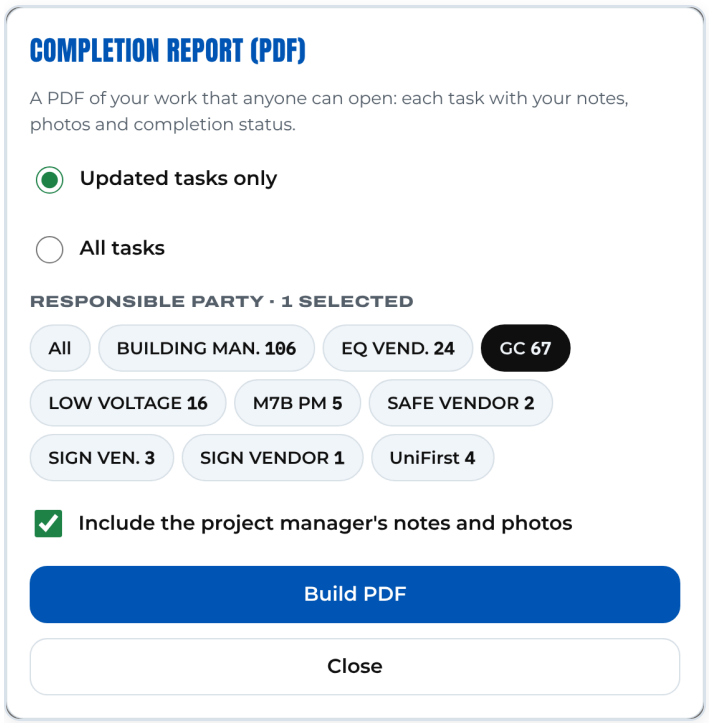

WORKING AS A TEAM

SHARE PROGRESS WITH MY TEAM

Hand your work to a coworker, for example from the foreman to the office. Click **Share progress with my team** and send them the team progress file. They open it on the vendor page with the stand number and see every photo, note and completed task so far. They can keep working or send the response file. A team progress file is **not** a response file; always send the project manager the file from **Create response file**.

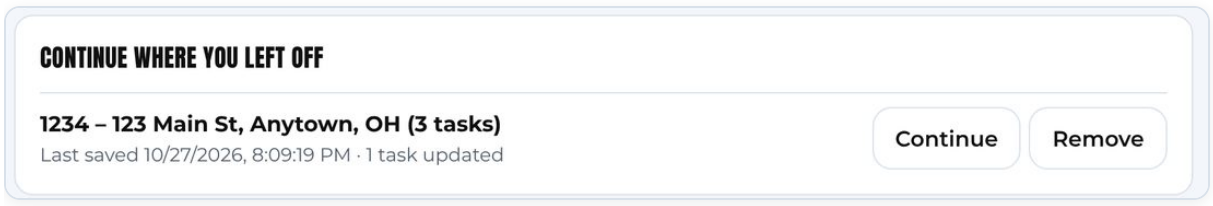

COMPLETION REPORT (PDF)

Click **Completion report (PDF)** for a PDF of your work that anyone can open: each task with your notes, photos and status. Choose updated tasks or all tasks, and all responsible parties or only the ones you pick (for example just GC). Use it for your records or your own team.

COMING BACK LATER

Your work saves in the browser as you go. Reopen the vendor page on the **same device and browser**, click **Continue**, and enter the stand number. Do not clear your browser history or use a private or incognito window.

TIPS

PROBLEM	WHAT TO DO
Wrong password or the file will not open	Use the stand number exactly. Choose the .json file itself; if it came in a .zip, unzip it first.
The response file is too large to email	Send your work in batches: create a response file after every 30 to 40 photos, email it, then keep going.
A task was sent back as not complete	Fix the work, add new photos to that task, and send another response file.
You switched phones or browsers	Your saved work stays on the first device. Ask a teammate there for a team progress file, or start from the task file again.
Questions	Contact the project manager who sent you the files.
